PROFESSIONAL SUMMARY

Information Science Engineering undergraduate (9.53 CGPA) at Ramaiah Institute of Technology with a strong foundation in software development, system architecture, and full-stack engineering. Experienced in architecting high-impact web platforms with Next.js 14 and React, enterprise systems with Java, PostgreSQL, and JDBC, and secure payment integrations with Razorpay. Passionate about resilient systems and clean, scalable code.

EXPERIENCE

Hewlett Packard Enterprise (HPE) July 2026 – Present
Career Preview Program (CPP2) Intern Bangalore, India

- Participating in the Career Preview Program, gaining hands-on exposure to enterprise software development lifecycles and HPE's edge-to-cloud architecture.
- Shadowing senior engineering teams in an Agile environment to assist in designing, testing, and debugging scalable software solutions, aiming to improve system efficiency by 15%.
- Engaging in technical workshops and cross-functional collaboration to bridge academic concepts with enterprise software production standards.

EDUCATION

Ramaiah Institute of Technology | B.E. Information Science (GPA: 9.53/10.0) 2024 – 2028
Jnana Sudha PU College | Pre-University (Class XII - PCMB) (Aggregate: 97.3%) 2022 – 2024
Don Bosco English Medium School | Secondary (Class X) (Aggregate: 90.67%) 2022

TECHNICAL SKILLS

- **Languages:** Java, C, C++, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3
- **Databases & Systems:** PostgreSQL (15-Table 3NF), MongoDB Atlas, MySQL, Relational Database Design
- **Frameworks & Tools:** Next.js 14, React.js 18, Node.js, Express.js, Java Swing, JDBC, Tailwind CSS, Git, GitHub
- **CS Fundamentals:** Data Structures & Algorithms, DBMS, Object-Oriented Programming, Multithreading

PROJECTS

Get-Me-Chai | *Next.js 14, React 18, Razorpay API, MongoDB Atlas, NextAuth, Tailwind CSS* Live App | GitHub

- Architected a full-stack creator patronage platform enabling supporters to fund creators via secure Razorpay payment gateway integration with server-side HMAC-SHA256 signature verification.
- Implemented NextAuth.js OAuth 2.0 authentication, dynamic creator profile dashboards, and high-throughput MongoDB Atlas schemas for real-time transaction ledgers and patron message feeds.

SurakshaSetu | *Java, PostgreSQL, JDBC, Swing, Multithreading*

- Architected a digital identity and trust management system for gig economy workers utilizing a 15-table normalized PostgreSQL database, maintaining 100% data integrity across concurrent transactions.
- Implemented a custom mathematical trust score algorithm factoring consistency, ratings, and income, persisting changes via atomic database transactions and comprehensive audit trails.
- Developed a multi-threaded GUI application featuring role-based access control (RBAC) and custom rolling-hash security without external libraries, minimizing application dependency overhead.

Spotify Clone | *JavaScript (ES6+), HTML5 Audio, Web Audio API, Tailwind CSS* Live Demo

- Built a responsive music streaming interface implementing custom logic for real-time audio controls, seekbar scrubbing, volume modulation, dynamic playlists, and mobile dark mode.
- Delivered a responsive design optimized for performance and cross-browser compatibility, achieving 95+ scores on web accessibility audits.

ACHIEVEMENTS & PARTICIPATION

Participant | Google x DeepStation x MSRIT Hackathon May 2026

- Participated in a hackathon organized by the Dept. of CSE (AI&ML / Cyber Security) at Ramaiah Institute of Technology; completed intensive technical workshop on emerging developer tools.

Finalist | BLACKBOX AI: Trick The System | RIT TechFest 2026

- Selected as a finalist among 50+ participants in a technical competition focused on testing and identifying vulnerabilities in AI logic systems.

Top Academic Performer (9.53 CGPA) | Ramaiah Institute of Technology 2024 – Present

- Maintained highest percentile academic standing across the Information Science & Engineering cohort at RIT.
